Objective

Computer Science soon-to-be graduate with hands-on experience building applications using C#, C++, Java, and JavaScript, seeking an entry-level software development position. I am seeking to join a collaborative team where I can continue growing my skills while contributing to projects that have a meaningful impact.

Technical Skills

Languages: C#, Java, C++, JavaScript, Typescript Python, SQL, HTML/CSS

Frameworks & Libraries: .NET, React, Angular, Spring Boot, Java Servlets, Unity, Bootstrap

Databases: MySQL, PostgreSQL, Relational Database Design, SQL

Development: REST APIs, Object-Oriented Programming, Data Structures & Algorithms, Web Applications, Unit Testing, Debugging

Tools: Git, GitHub, GitLab, Docker, Node.js, Maven, Apache Tomcat, JUnit, Visual Studio, VS Code

Methodologies: Agile/Scrum, Sprint-Based Development, Version Control, Collaborative Development

Education

Eastern New Mexico University

Associate of Arts in General Study | May 2025

Western Governors University

Bachelor of Science in Computer Science | Expected November 2026

Projects

Landon Hotel Application

Java | Spring Boot | Angular | Typescript | Node.js | REST | Docker | Azure | GitLab

- Developed backend REST controllers for an Angular hotel application frontend.
- Created a Docker image of the application and deployed it to a Microsoft Azure resource.
  - Used GitLab for source control and maintaining an organized development workflow.

Travel Agency Application

Java | Spring Boot | SQL | REST | GitLab

- Developed a Spring Boot backend for a travel agency Angular frontend. Implemented REST API's and integrated a database with JPA/Hibernate.
- Used Class diagrams and ERDs to create entities that functioned with the frontend.
  - Used GitLab for source control and maintaining an organized development workflow.

Hotel Reservation Application

Java | Java Servlets | MySQL | Maven | Apache Tomcat | JUnit | Git

- Developed a database-driven hotel reservation web application as part of a four-person development team.
- Implemented server-side functionality using Java Servlets and integrated application features with a MySQL relational database.
- Worked within a Scrum/Sprint development process to plan features, collaborate on implementation, troubleshoot issues, and integrate changes.
- Used JUnit for testing and Git for source control throughout development.

Unity Drag-and-Drop Inventory System

C# | Unity | Object-Oriented Programming | Data Structures | UI Systems

- Designed and developed a reusable inventory framework in C# and Unity 3D intended for integration across multiple game projects.
- Implemented separate item, inventory, toolbar, slot, and database components to organize item management and user interaction.
- Applied object-oriented inheritance to support specialized item types and a centralized item database for reusable item creation and retrieval.
- Implemented drag-and-drop inventory interactions and toolbar functionality for transferring items between inventory and toolbar slots.

Stock Viewing Application

React | JavaScript | REST API | HTML/CSS

- Developed a React web application that consumes an external REST API to retrieve and display stock information.
- Implemented reusable components and asynchronous API requests to dynamically retrieve and present application data.
- Built an interactive interface for searching and viewing market information.

C++ Shell Simulator

C++ | Operating Systems | Systems Programming

- Developed a command-line shell simulator in C++ to model fundamental operating system shell functionality.
- Implemented command processing and system-level functionality while applying object-oriented programming and debugging techniques.

LRU Cache Simulator

C++ | Data Structures & Algorithms

- Developed an LRU cache simulator in C++ to model cache replacement and access-order behavior.
- Applied data structures and algorithmic concepts to efficiently track cached elements and determine replacement candidates.

Work Experience

UNITED STATES POSTAL SERVICE

City Carrier | August 2024 – Present

- Independently manage daily responsibilities in a deadline-driven environment requiring organization, reliability, and attention to detail.
- Adapt to changing operational requirements while maintaining productivity, accuracy, and service standards.
- Communicate with coworkers and supervisors to resolve operational issues and maintain daily operations.
